Ilmiy raxbar: Amira Uktamovna Xamrakulova

SamDCHTI ingliz tili fani o'qituvchisi.

Abstract: in this article, you will read about the easy and effective ways of teaching English through educational technologies and artificial intelligence in today's modern world. In addition, you will learn about the benefits of artificial intelligence in language learning.

Key words: modern technologies, method, technique, artificial intelligence, English language teaching, adaptive education, innovative technology.

Annotatsiya: ushbu maqolada siz bugungi zamonaviy dunyoda ingliz tilini ta'lim texnologiyalari va sun'iy intellekt orqali o'qitishning oson va samarali usullari haqida o'qiysiz. Bundan tashqari, til o'rganishda sun'iy intellektning hayotimizga qanday foydali tomonlari borligi haqida bilib olasiz.

Kalit so'zlar: zamonaviy texnologiyalar, metod, texnika, sun'iy intellekt, ingliz tilini o'qitish, adaptiv ta'lim, innovatsion texnologiya.

In these modern days, it is typically-known that it is hard to teach students at the schools, however, you can learn much experiences as a teacher and also should observe methods of teachers and process of lessons, how to plan correctly classes, time management as well. Moreover, the teacher should be able to focus children's attention and conduct lessons in an interesting way. By the twenty first century, the education system and the teaching system are developing rapidly. Nowadays, in the modern education system, instructors are teaching to pupils through the new technologies. This article gives you a brief concepts on how to educational system of schools and about what teaching methods teachers should use. Teachers and mentors provide critical insights, feedback, and structured learning strategies that help students overcome these obstacles and achieve higher proficiency. Therefore, the role of teachers and mentors is essential for guiding students towards language mastery, ensuring they not only learn vocabulary but also understand how to use the language accurately and effectively. Effective teaching of English through educational technologies and AI involves using tools like language learning apps, chatbots, and AI-powered platforms to personalize learning, provide instant feedback, and offer interactive experiences. These methods can cater to various learning styles, improve speaking, listening, reading, and writing skills, and make learning more engaging.

Teaching English through educational technologies and artificial intelligence (AI) has transformed language learning by making it more interactive, personalized, and efficient.

1. AI-Powered Language Learning Apps

Provide instant feedback on grammar, pronunciation, and vocabulary.

Use gamification to keep learners motivated.

2. Virtual Classrooms and Learning Management Systems (LMS)

Platforms like Google Classroom, Moodle, and Microsoft Teams enable:

Real-time interaction with students via video/audio. AI tools for grading and tracking progress. Access to multimedia content like videos, quizzes, and games.

3. Chatbots and Conversational AI

Chatbots simulate real-life conversations to:

Practice speaking and listening skills. Improve fluency through AI-driven dialogues. Allow 24/7 learning support and practice.

Example: AI tutors like ChatGPT can act as conversation partners.

4. Speech Recognition and Pronunciation Tools

Tools like ELSA Speak and Google Speech Recognition:

Help learners improve pronunciation using real-time feedback. Track accuracy and fluency over time. Use AI to analyze accent, stress, and intonation.

5. Adaptive Learning Platforms

AI-based systems such as Knewton adapt to each student's level by:

Providing customized grammar/vocab exercises.

Due to children's excitement, they do not sit quietly during the lessons, and in addition, there are rude children in every class, it is difficult for teachers to teach and they need good experience. They are asked to get good education and qualifications in educational institutions and master's degrees. They should use several methods in the course of the lesson and should attract students to themselves. English teachers of kindergarten age teach children through easy methods, making full use of objects around the students, flashcards and other teaching aids. When teaching words like "banana" and "apple", teachers can simultaneously teach new words for color by showing fruits like banana and apple. Children learn how to use them in a foreign language through classroom objects to organize educational activities. Of course, the teacher's methodology plays a big role in the use of materials during teaching. For example, when teaching related words, you first show the object to the child and encourage him to say it, the students pronounce the words, and repeat the new word again using the pictures on the cards to reinforce the word they said. In the teaching of words, teachers can determine the content of the text, and in order to attract the attention of students, the educator can draw their picture on the board by pronouncing the words together with them. There are some kinds of methods and techniques to teach children and attract their concentrations. Firstly, your cloth attract of students attention as well, and also your speech. Young children's attention can be drawn

more through picture books and exhibitions, and color exhibitions are excluded. Cartoons, although children do not understand the words in the cartoon while learning a foreign language, they try to understand the words they use through the actions of the characters in the cartoon. This is an interesting and effective way for children to learn the language. Using soft toys in preschool education, naming them and making children interested in lessons through various scenes is also an effective method.

The rapid development of artificial intelligence (AI) technologies has also brought about major changes in the field of education. In the modern world, the integration of technology into education is fundamentally changing not only teaching methods, but also the ways in which students acquire knowledge. These changes are especially noticeable in the field of English Language Teaching, where AI tools such as chatbots, Natural Language Processing (NLP) systems, virtual assistants and flexible learning platforms are increasingly being used. These innovative tools offer opportunities such as personalized learning, real-time assessment, increasing student interest and adapting to their individual needs. Through AI tools, students are able to independently improve their knowledge, receive real-time corrections and make the language learning process interesting and effective through interactive exercises. However, these innovations bring not only opportunities, but also a number of difficulties and problems. For example, the implementation of SI tools raises complex questions such as ethical issues, data protection, teacher technological readiness, resource constraints, and equal opportunity issues.

Below are some effective methods and tools used:

1. Gamified Learning and Augmented Reality (AR)

Platforms like Kahoot!, Quizlet, and AR tools (e.g., Mondly AR) make learning fun and interactive. Use quizzes, flashcards, role-playing games, and virtual environments to simulate real-world language use.

2. Automated Writing Assistants

Tools like Grammarly or Quillbot:

Provide real-time grammar and style corrections. Offer vocabulary suggestions. Help develop academic and creative writing skills.

3. Data Analytics in Language Learning

AI systems can analyze:

Student performance trends. Areas needing extra attention. Tailored feedback and intervention strategies.

The relationship between pedagogy and the science of psychology is traditional in the modern life. Modern pedagogy which is a multidisciplinary science, and first of all, it is connected with the history of pedagogy in the sense that education is a social phenomenon. In the system of connection of pedagogy with other disciplines, ethnography and folk pedagogy occupy a special place. Teaching elementary school students writing is the foundation of literacy. The purpose of primary school education is to make students fluent in oral and written

speech and to educate them as mature people in all aspects, to grow them as people who strive for beauty, who strive to create beauty that can feel it from the heart. The main goal of teaching writing is to teach young students the complex writing process and to form their beautiful writing skills. These tasks are multifaceted, they help students develop intellectually, expand their knowledge about the environment, educate their moral and aesthetics, develop conscious reading and writing skills, and the skills of working with a notebook and it consists of forming skills.

Thus, integrating SI tools into English language teaching can play an important role not only in improving the quality of education, but also in developing students' creativity, critical thinking, and independent learning skills. However, this requires close cooperation and continuous development among all stakeholders - teachers, students, educational institutions, and technology providers.

Every teacher should study harder in institute and master's degree. They help to improve children's intelligence and also it is necessary to educate the young generation to learn and gain experience, and to create ample opportunities for women.
